

Pictorial Translate

Style Guide & Design System

Visual Aesthetic: Neon Neumorphism

The UI utilizes **Glassmorphism** for surfaces and **3D transforms** for interactivity. The goal is to make the application feel like a tactile, high-tech translation slate.

Core Palette

Surface: #0F172A

Accent 1: #8B5CF6

Accent 2: #06B6D4

The 3D "Vibe"

Depth: Use layered shadows (box-shadow) to create "outer" and "inner" depth. Buttons should depress on click using CSS active states.

Glass: Apply backdrop-filter: blur(15px) to containers to allow the background glows to bleed through softly.

Key Interaction

The Scanner Effect: While the image is being processed, a horizontal "cyan laser" should sweep across the image container, accompanied by a subtle 3D tilt effect on the card itself.
